

CH 15.1

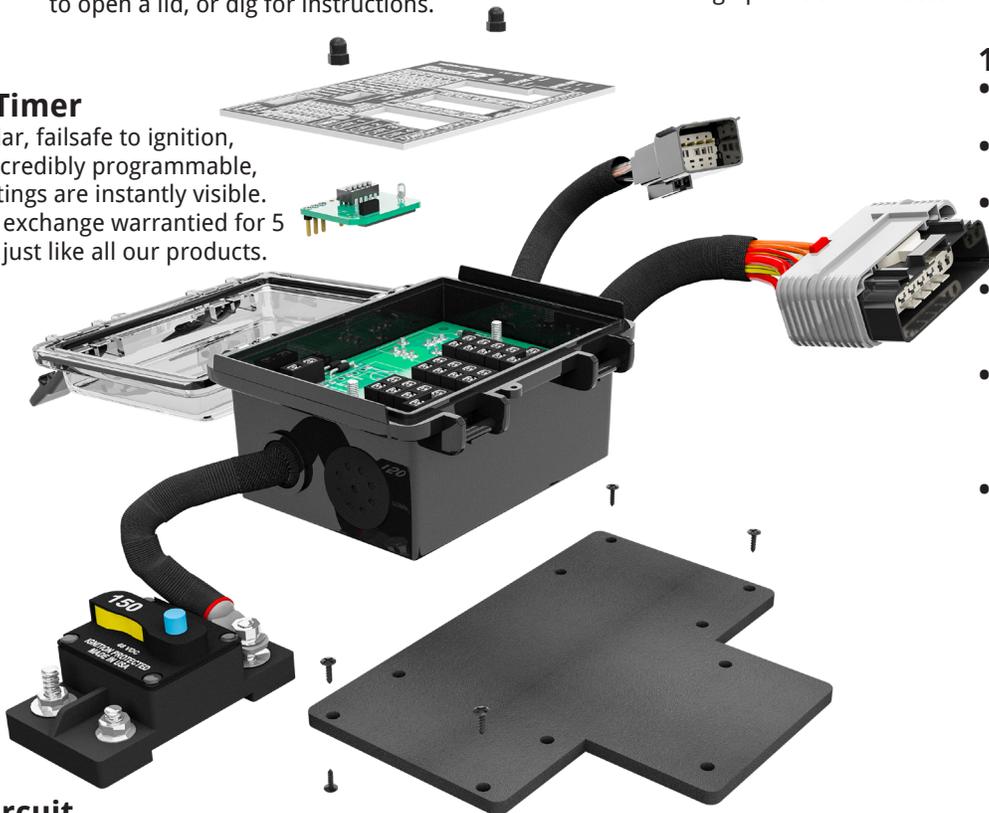

Designed for admin and general fleet, with the capacity to support patrol cars. 3 distinct models to match any need.

Custom lasering

We laser each cover plate, to quickly identify circuit functions and all timer settings, for instant visual identifications, without the need to open a lid, or dig for instructions.

TS1 Timer

Modular, failsafe to ignition, and incredibly programmable, all settings are instantly visible. Direct exchange warranted for 5 years, just like all our products.

Smart Cables

With flexible cable connections, installation restrictions are a thing of the past. By custom printing all wires in house to order, wire marking options are limitless.

15 Circuits

- Two 10 gauge, Two 12 gauge, and Ten 16 gauge circuits standard.
- One 16 gauge "Bypass" circuit which can be configured as hot, or ignition at install.
- 1 Siren mute circuit (insert the siren mute resistor to this output to reduce 90% of siren volume when servicing the siren).
- Lighting trigger wires for levels 1, 2, & 3 are included along with siren speaker wires.
- Switched outputs can be set as timer controlled, or automatically default to ignition controlled if no timer is present, or the timer fails.
- Output rows are arranged according to color (red x4, yellow x3, bypass x1, siren mute x1, orange x6) for easy identification.

Circuit Breaker

Included master circuit breaker allows for quick power disconnect when servicing the vehicle.

Four Screws Mounting

Custom mounting plates to install the harness wherever you want, in any vehicle. Harness wires available separately to allow master panel transfer from a wrecked vehicle.
