

# CH8.1X

The excellent choice for UC vehicles.  
Ultimate wiring flexibility to meet any need.

## Custom Cover Plate

We custom laser each cover plate to clearly identify each circuit, function, and timer settings, allowing instant visual inspection, without the need to open a lid.

## TS1 Timer

Fail safe to ignition means your vehicle stays in service no matter what. Settings are deeply programmable, including Smart Start functions, and always instantly visible.

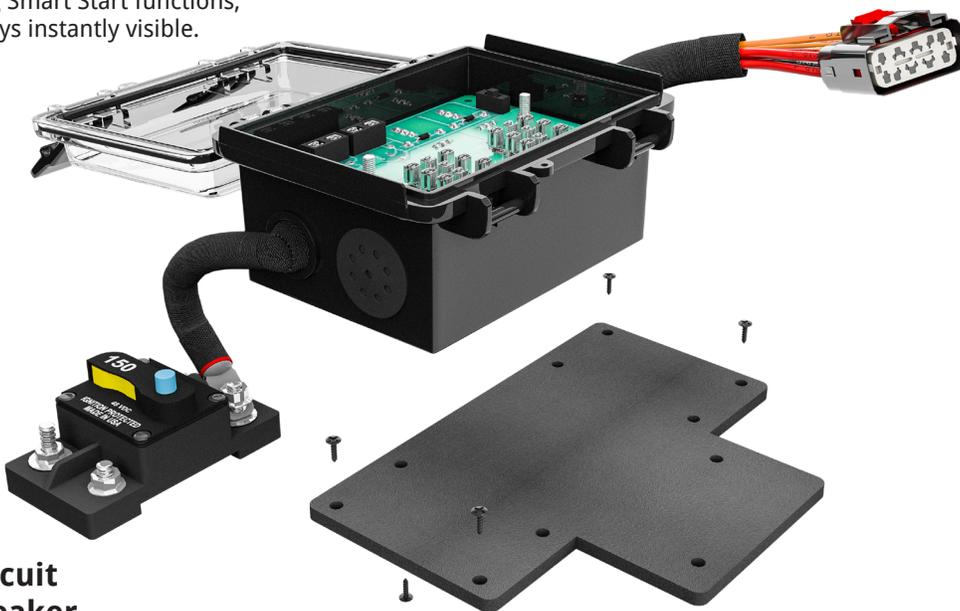

## Flexible Connector Positioning

Cam-lock connectors provide limitless routing options. All wires are custom printed in house with reversing print every 3 inches, making them easy to read from any direction.

## 8 Circuits

- 8 circuits (4x 12gauge, 4x 10 gauge). Wires are GXL/TXL, meeting SAE J1128.
- All 8 circuits have the option to be set as hot, or switched type, just by changing the position of the fuse. Hot, timed or ignition, the choice is yours.
- Outputs shown as switched can be set as either ignition or timer controlled.
- Output rows are arranged according to color (red x4 and orange x4), for easy identification.

## Circuit Breaker

Circuit breakers that are made in the USA, provide a quick way to disconnect power.

## Four Screw Mounting

We custom laser numerous mounting solutions so when your fleet changes, conversions are as easy as changing the mounting plate.
